

OMAS COMPANY POLICY

Environmental Policy:

The management is aware of the extreme importance of the safeguard and protection of the environment and it is committed to improve the environmental performances and to prevent the pollution in order to mitigate the environmental impacts related to the activities executed in its own manufacturing site that are related to the context in which it is placed, to the definition of the interested parties as well as their expectations.

OMAS in this perspective has adopted an Environmental Management System complying with the international regulation through which the environmental improvement plans and programs of the environmental performances are defined.

The management is committed to achieve the points above and particularly to:

- comply with all the relevant provisions of law related to the environment by adopting a system for collecting and updating these regulations; some Operational Procedures able to allow the application of the legal obligation as well as a system of periodic inspection for the execution of what has been established;
- continuously improve the environmental performances by the progressive reduction of the negative environmental impacts of the activities carried out;
- pay attention to the requests of the employees by taking into account the expectations concerning the environmental field in order to guarantee a relationship of transparency and collaboration with the staff and by involving them in the protection of the environment;
- prevent the pollution and reduce the negative environmental impacts according to the existing needs, the consumption of energy, the natural resources and the raw materials, by punctually analyzing the activities that may generate negative environmental impacts over which the direction has got control power and/or management and any new activity or process in order to make both economically founded choices and according to the function of the environmental performances;
- reduce the production of waste by ensuring the recovery of the waste generated by the working processes;
- sensitize the Customers and the suppliers to adopt procedures aimed to reduce the environmental impacts;
- encourage the use of local suppliers and so “ 0 Km SUPPLIERS ”;
- design products that have the prerogative of saving the energy and water with solutions specifically designed.
